Education

National Institute of Technology, Rourkela **2025 – present**
M.Tech, CSE (CGPA-8.03) *Rourkela, Odisha*

Rajkiya Engineering College, Ambedkar Nagar **2021 – 2025**
B.Tech in Information Technology (CGPA-7.87) *Ambedkar Nagar, Uttar Pradesh*

Reliance Academy, Gorakhpur **2020**
Higher Secondary Education (CBSE)- 77% *Gorakhpur,Uttar Pradesh*

Divine Public School, Gorakhpur **2018**
Secondary Education (CBSE)- 80.4% *Gorakhpur, Uttar Pradesh*

Relevant Coursework

- Data Structures
- Computer Architecture
- Database Management
- Problem Solving
- Operating System

Projects

Early Diagnosis of Oral Cancer using Machine Learning and AI | *Python, Deep Learning* **April 2025**

- Designed and implemented a deep learning model in Python for early detection of oral cancer from medical images and clinical data .
- Implemented and benchmarked four transfer-learning architectures — VGG16, VGG19, ResNet50, and DenseNet — to classify oral lesions and identify early cancer indicators.
- Built CNN-based classification pipelines using TensorFlow/Keras with custom ImageDataGenerator pipelines for efficient training and validation on image data.
- Performed extensive data preprocessing, image normalization, and augmentation (rotation, width/height shifts, shear, zoom, horizontal flip) to improve model generalization and robustness on a limited medical imaging dataset.
- Fine-tuned pre-trained VGG16, VGG19, ResNet, and DenseNet models using transfer learning — freezing base convolutional layers and training custom dense classification heads — to boost classification accuracy and reduce training time versus training from scratch.
- Evaluated and compared models using accuracy, precision, recall, F1-score, and MSE, iterating across multiple training configurations (100/500/1000 epochs) to identify the optimal training duration and reduce overfitting.

Spotify Homepage Clone | *HTML, CSS*

- Developed a responsive Spotify web application clone using HTML5 and CSS3, replicating the platform's UI/UX including navigation sidebar, top bar, and dynamic content sections.
- Implemented CSS Flexbox/Grid layouts to build a pixel-accurate, responsive interface that adapts across desktop, tablet, and mobile screen sizes.
- Designed reusable component-based CSS (cards, buttons, playlists, album tiles) to maintain consistency and reduce code duplication across the page.
- Applied modern CSS techniques such as custom properties (variables), hover animations, transitions, and gradients to replicate Spotify's dark-themed aesthetic.

Technical Skills

Languages: C, C++, SQL, OOPs, HTML, CSS
Developer Tools: VS Code
Technologies/Frameworks: MySQL Workbench

Leadership / Extracurricular

Hobby Council **March 2024 – January 2025**
President *Rajkiya Engineering College*

- Organized and managed cultural, technical, and creative programs under the Hobby Council to promote student hobbies and talents.
- Led an executive team of 5+ members and conducted weekly meetings to ensure smooth functioning of various clubs.
- Coordinated 30+ student members in planning events that encouraged creativity, collaboration, and community participation.
